SUMMARY

Full-stack developer. React and TypeScript on the frontend, Node.js or PHP on the backend, and comfortable owning the database and deployment side too. Built an OAuth 2.0 SSO platform now used across the company, and spend most days on production WooCommerce work: subscriptions, billing, checkout, and the payment flows that don't quite behave.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, PHP, SQL, HTML/CSS

Frontend: React, TailwindCSS, Context API

Backend & Data: Node.js, Express.js, Prisma, PostgreSQL, MySQL, REST API design

Auth & Identity: OAuth 2.0

DevOps & Tooling: Docker, Git/GitHub

WordPress & WooCommerce: theme development and migration, plugin customization, subscriptions and recurring billing, checkout customization, custom admin dashboards, roles and capabilities, transactional email templates, Elementor, Gravity Forms

Integrations & Automation: REST APIs, webhooks, payment processing troubleshooting, conditional workflow routing, Zoho

Testing & Performance: Cypress (E2E), PageSpeed Insights, uptime monitoring

Tools: Git, Figma, Obsidian (project notes and context for AI-assisted work), Claude Code CLI (custom plugins and skills)

EXPERIENCE

Web Developer | InsBOSS USA | Remote

July 2025 – Present

- Architected and shipped a company-wide single sign-on platform (TypeScript, React, Prisma, OAuth 2.0, PostgreSQL, Docker) giving roughly 300 employees one credential across 7 internal applications, replacing per-app manual sign-ins.
- Maintain and extend a multi-brand WooCommerce subscription platform across several interconnected WordPress sites, covering recurring billing, checkout, and payment processing.
- Investigate and resolve billing discrepancies by tracing subscription records against payment transactions, then fixing the code path behind the error rather than correcting records by hand.
- Customize WooCommerce plugins, checkout pages, and transactional email templates in PHP where stock behavior does not fit the subscription model, including porting a full template and checkout set across product lines.
- Own inbound support tickets in Zoho end to end; wrote the SOPs and workflow guides the team uses for recurring billing and platform issues.
- Built custom Claude Code CLI plugins and skills encoding project conventions and codebase context, so AI-assisted changes follow existing standards and need less rework before release.

Full Stack Developer Intern | Wesleyan University Hospital Philippines

January 2025 – May 2025

- Migrated a legacy patient database into the hospital's new system, reconciling schema differences and duplicate records so clinical staff worked from one source of truth.
- Built the patient records interface in React and TailwindCSS with Context API managing user sessions and record state, backed by REST endpoints for data exchange with backend services.
- Wrote Cypress end-to-end tests covering form validation, core patient workflows, and API responses, catching regressions before handoff.

SELECTED PROJECTS

Company SSO Platform | InsBOSS USA | Live · TypeScript, React, Prisma, OAuth 2.0, PostgreSQL, Docker

- Architected and built a single sign-on system end to end, backend to frontend: OAuth 2.0 auth flow with a Prisma/PostgreSQL user store, containerized with Docker, giving roughly 300 employees one global credential across 7 internal applications instead of a separate manual sign-in per app.

WooCommerce Platform Rebuild | InsBOSS USA | Live · PHP, WordPress theme development, WooCommerce, JavaScript

- Rebuilt a live WooCommerce site off its legacy theme and accumulated design code onto a fresh modern theme, migrating every page type rather than patching templates one at a time.
- Raised the site's PageSpeed score from 48 to 91 and left the codebase in a state the team can extend for additional stores.

Client Accounting Dashboard | InsBOSS USA | Live · PHP, WooCommerce, WordPress roles and capabilities

- Built a role-scoped dashboard so a client's accounting executive can create orders and coupons, add order notes, modify subscriptions, and email customers without needing WP admin access.

Finance Approval System | InsBOSS USA | Internal · PHP, WordPress, MySQL

- Built the approval workflow as structured PHP — data model, role-based access for requesters/approvers/finance, and routing rules between them — replacing roughly 100 manual process steps per week with a system where every request carries an owner and a timestamp.

EDUCATION & CERTIFICATIONS

Bachelor of Science in Information Technology, Major in Web Systems Technology

Nueva Ecija University of Science and Technology (NEUST) — Nueva Ecija, Philippines · 2021 – 2025

Certifications: IT Specialist — HTML and CSS, Certiport (2024) · NC III Bookkeeping, TESDA (2019)
